

# Ensuring device-network interoperability saves costs and increases quality

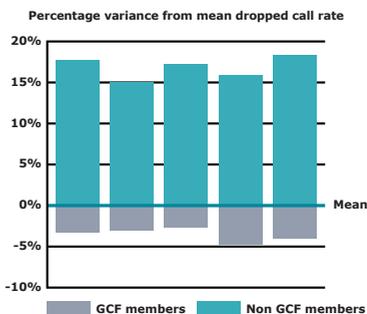

## What's covered by GCF certification?

GCF offers the most comprehensive test database in the mobile industry, supporting an eco-system with test equipment solutions and accredited testing laboratories.

GCF certification criteria is updated quarterly to reflect the evolution in standards and changes in services as agreed between operators and manufacturers.

Manufacturers of smart phones that have not undergone GCF testing typically have call drop rates that are around 20% higher. Meeting minimum antenna performance and having correctly implemented the standards are the basis for having smart phones properly working in all networks around the world.

GCF aligns certification with operators' implementation of new bands and features.

Higher dropped call rates of non-GCF members

## Join GCF today to increase your competitiveness in the mobile market

Obtaining GCF certification improves the performance of your smart phone, reduces interoperability issues with networks and services while enabling new business.

Who are we? GCF is the mobile industry's certification mark for mobile products

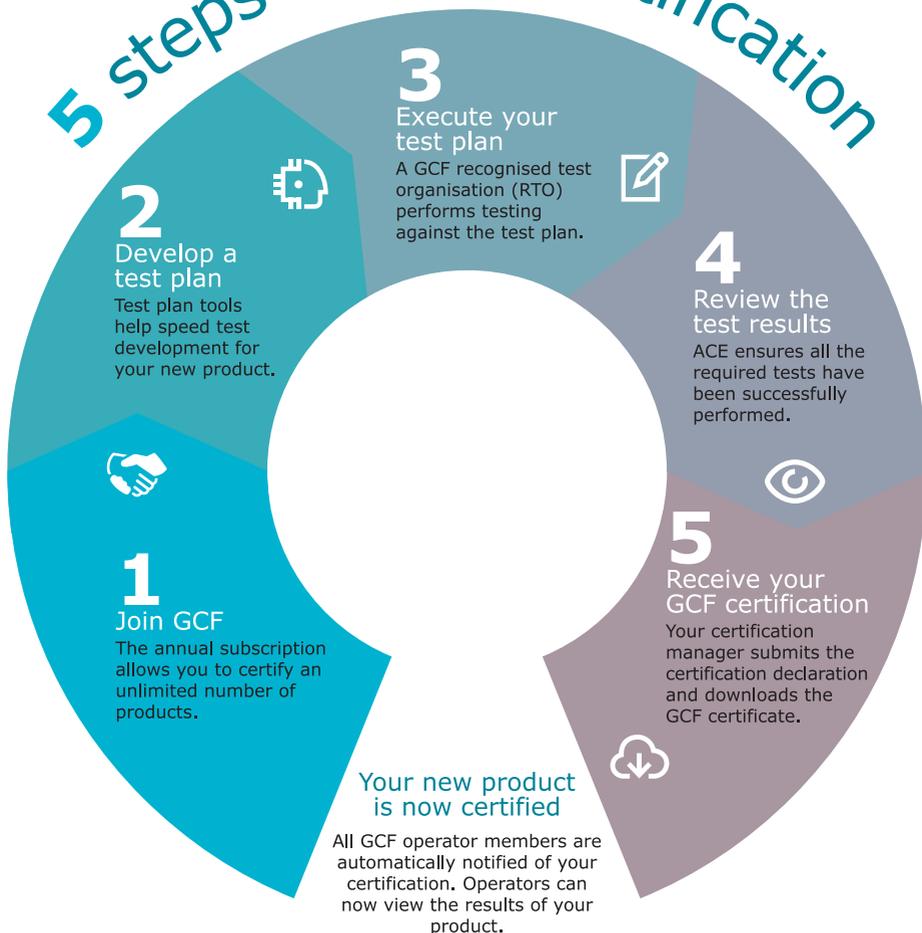

- 300+ member firms worldwide
- Major brands participate
- 297 smart phones certified in 2017
- Global test eco-system
